

Pocket Traverse

Pocket Traverse

Pocket Traverse

SIHGA® Feature

The Pocket Traverse is a traverse with a small format

Couples two load handling attachments with each other

Specialist geometry

The Pocket Traverse can also be used as a balancing rocker

Chains with shortening claws

2,500 kg load capacity

Long service life

Low-maintenance

CE marking

YOUR Benefit

It is easily transportable and therefore also readily available

By coupling two load handling attachments, twice the load can be lifted

The patent-pending geometry guarantees equal load distribution on each anchor point for lifting angles between 0° and 45°

When lifting 4 strands, e.g. ceiling elements, all four chain strands can be assumed to have the same load-bearing capacity

The Pocket Traverse can also be used correctly with challenging geometries

When using 2 Pocket Traverses, elements up to 5,000 kg can be lifted up

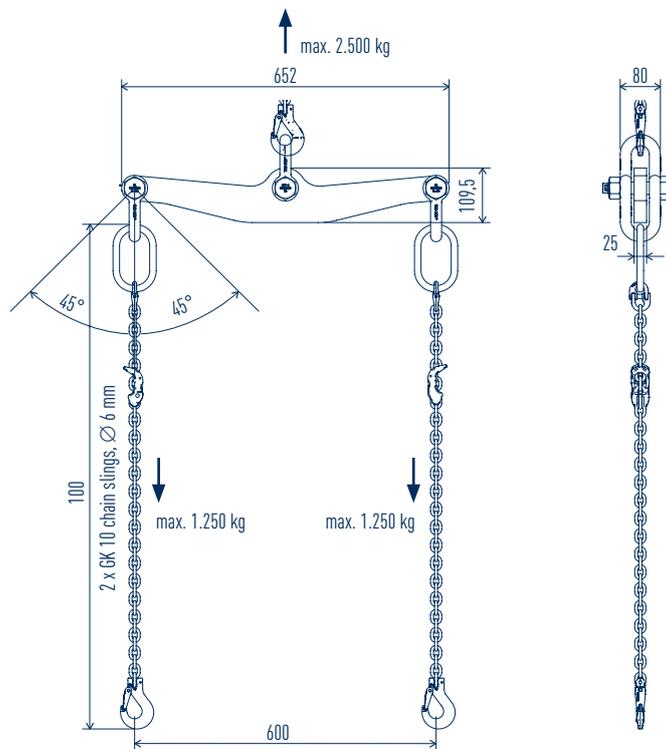

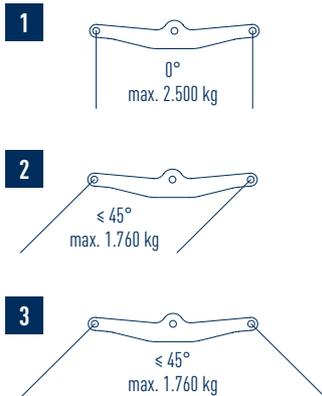

Up to 16,000 load cycles

Annual inspection together with personal safety equipment in accordance with the Work Equipment Ordinance

Provides security through conformity with all relevant standards

Pocket Traverse
Art. No. 50036

Load cases:

SIHGA® TIP:

In combination with the SIHGA® Pick, the system offers maximum safety and efficiency and elements can be lifted with twice the weight as before
