

KompeFix[®] II KF

SIHGA[®] Feature

universal, constructive wood protection for facades with height 8 mm and width 21 mm

developed, patented and made in Austria

the roll with 4.5 metres length is only fastened structurally

patented, helps to seal the screw

the pre-load effect integrated through the specific shape compensates for the swelling and shrinkage of the timber

monitored production from polyvinyl chloride, with a special recipe

quantity calculation per m²

includes installation instructions

YOUR Benefit

creates distance between the woods; thereby allowing them to breathe and increasing their lifespan

local quality, experience from more than 14 years of facade construction included

fast and easy, can be fixed as desired (screwable) and cut to length

increases the service life of the construction

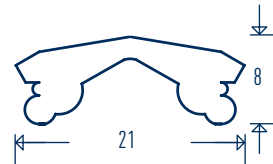

improves the appearance of the facade

remains permanently dimensionally stable, is heat-, frost- and UV-resistant

1: substructure distance [m] : 4.5

is time-saving and enclosed for practicality
